240EM113 - 240EM113 - Electrical, Magnetic, Optical and Thermal Properties of Materials

Last modified: 14/06/2023

Unit in charge:	Barcelona East School of Engineering
Teaching unit:	702 - CEM - Department of Materials Science and Engineering.
Degree:	ERASMUS MUNDUS MASTER'S DEGREE IN ADVANCED MATERIALS SCIENCE AND ENGINEERING (Syllabus 2014). (Optional subject).
Academic year: 2023	ECTS Credits: 3.0
Languages: Spanish	

LECTURER

Coordinating lecturer: Roa Rovira, Joan Josep

Others: Roa Rovira, Joan Josep

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:

CEMCEM-01. (ENG) Aplicar coneixements de matemàtiques, física, química, biologia i altres ciències naturals, obtinguts mitjançant estudi, experiència i, pràctica, amb raonament crític per a establir solucions viables a problemes tècnics.

CEMCEM-04. (ENG) Realitzar estudis de caracterització, avaluació i certificació de materials segons les seves aplicacions

Transversal:

06 URI N2. EFFECTIVE USE OF INFORMATION RESOURCES - Level 2. Designing and executing a good strategy for advanced searches using specialized information resources, once the various parts of an academic document have been identified and bibliographical references provided. Choosing suitable information based on its relevance and quality.

TEACHING METHODOLOGY

Subject in process of extinction. There is no teaching, the students that enroll it do so only with the right to an exam.

LEARNING OBJECTIVES OF THE SUBJECT

The aim of the course is that students acquire basic knowledge about the physical properties of materials.

At the end of the course the student should be able to:

- ? Understand the basics of solid state physics
- ? Identify the main optical effects of materials and understand the interaction between light and materials
- ? Classify materials according to their electrical behavior. Relate the macroscopic electrical behavior with the behavior of electrons in materials
- ? Differentiate between the different magnetic responses of materials. Identify the main magnetic parameters of ferromagnetic and ferrimagnetic materials

STUDY LOAD

Type	Hours	Percentage
Hours small group	9,0	12.00
Self study	48,0	64.00
Hours large group	18,0	24.00

Total learning time: 75 h

CONTENTS

Introduction to Solid State Physics

Description:

The atom and the periodic table. Basics of quantum physics. Schödinger equation. Atom&Molecular orbitals. Energy bands in solids. Kronig-Penney model. Density of states. Fermi-Dirac function & calculation of charge/magnetic momentum carriers. Clasificaction of materials according to their band structure

Full-or-part-time: 22h

Theory classes: 8h

Self study : 14h

Electricity

Description:

Electric fields and parameters. Theory of conductivity. Metals. Intrinsic semiconductors. Extrinsic semiconductors. dielectrics

Full-or-part-time: 19h

Theory classes: 8h

Self study : 11h

Magnetism

Description:

Magnitudes and magnetic fields. Diamagnetic, paramagnetic, ferromagnetic and ferrimagnetic materials. Behavior with temperature: Curie temperature. Magnetic Domines. Magnets

Full-or-part-time: 15h

Theory classes: 6h

Self study : 9h

Optics

Description:

Nature of light. Interaction with materials. Reflection, refraction and absorption. Polarization. Scattering. Introduction to color. Interference and diffraction.content english

Full-or-part-time: 13h

Theory classes: 9h

Laboratory classes: 4h

Thermal properties

Description:

Thermal magnitudes and their relationship to materials. Phonons. Heat capacity. Conductivity. Thermal Shock

Full-or-part-time: 6h

Theory classes: 2h

Self study : 4h

GRADING SYSTEM

Subject in process of extinction. There is only one final test that corresponds to 100% of the final grade of the subject.
