## TEACHING METHODOLOGY

L'assignatura consta de classes en les que el professorat presenta els objectius d'aprenentatge relacionats amb els diferents continguts i posteriorment s'apliquen en la resolució d' exemples pràctics. S'afavoreix la participació activa de l'estudiantat durant la resolució dels casos pràctics, proposant un bon nombre de problemes numèrics i es motiva mitjançant propostes de casos reals relacionats amb l'àmbit de la química.

Durant el curs se'ls proporciona material i eines d'aprenentatge per tal d'orientar i guiar a l'alumnat en el seu procés d'aprenentatge i que pugui consolidar els coneixements sobre química que va assolint al llarg del curs.

## GRADING SYSTEM

---

The final mark will consist of three inputs:

- 1) Partial exam: EP
- 2) laboratory: Elab
- 3) Final exam: EF

The course is evaluated from:

$$NF = 0.15 * \text{Elab} + 0.25 * \text{EP} + 0.60 * \text{EF}$$

Laboratory sessions are mandatory, in case of absence to any of the sessions, the final qualification of the course will be NP (not presented).

Re-evaluation exam will account for EP and EF

The students will be able to access the re-assessment test that meets the requirements set by the EEBE in its Assessment and Permanence Regulations (<https://eebe.upc.edu/ca/estudis/normatives-academiques/documents/eebe-normativa-avaluacio-i-permanencia-18-19-aprovat-je-2018-06-13.pdf>)

## EXAMINATION RULES.

---

In all the written exams will be necessary to bring a pocket calculator . In any case you can not have any electronic devices with capabilities to transfer data, neither notes nor formulae summaries .
